# Full Internet Mobility in a 3G-4G Mobile Environment: managing new business paradigms

 Egea

# Table of Contents

Preface	ix	
Introduction	1	
<b>Section One</b>		
<b>The Context</b>		
<b>1 3G Mobile Multimedia Market</b>		
1.1 Introduction 11 • 1.2 On-line Interactive Multimedia Services 11 • 1.2.1 Mobile multimedia services 12 • 1.3 A generic categorization of mobile services 13 • 1.4 Content qualifiers 17 • 1.5 Structure in networked markets 17 • 1.5.1 The dynamic value creation process 18 • 1.5.2 Elements of the 3G mobile value chain 19 • 1.6 A strategic analysis of forces influencing the wireless value chain 22 • 1.7 Device value chain 24 • 1.8 Infrastructure value chain 25		
<b>Section Two</b>		
<b>The Demand Analysis: The User-Centric Communication Paradigm</b>		
<b>2 Determinants of Adoption of Third Generation Mobile Multimedia Services</b>		
2.1 Introduction 31 • 2.2 Conceptual background 31 • 2.3 Research framework 33 • 2.3.1 Methodology 33 • 2.3.2 Preliminary pilot studies 33 • 2.3.3 Exploratory qualitative stage 35 • 2.3.4 Exploratory quantitative stage 36 • 2.3.4.1 Conjoint analysis 36 • 2.3.4.2 Sample 37 • 2.3.4.3 Analysis and results 37 • 2.4 User profiles/segments 41 • 2.5 Conclusion, managerial implications, and future research 41		
		<b>3 3G Mobile Multimedia Services: A Market Dynamics Model</b>
		3.1 Introduction 43 • 3.2 Theoretical background 43 • 3.3 Mobile user subpopulations 44 • 3.4 The mobile services forecasting system 45 • 3.4.1 The value proposition model 46 • 3.4.2 The choice model 48 • 3.4.3 Modeling dynamics 50 • 3.5 Validation of the Model 50 • 3.6 Discussion 52
		<b>4 Business Drivers in the Corporate Market for Wireless Data Technology</b>
		4.1 Introduction 53 • 4.2 A categorization of mobile business services 53 • 4.3 The value proposition of mobile business services and applications 55 • 4.3.1 Mobile office 55 • 4.3.2 Mobile operations 57 • 4.4 Factors influencing adoption of IT/E-Commerce by business: the theoretical background 58 • 4.5 Business drivers in WLAN deployment 59 • 4.5.1 The market segmentation 59 • 4.5.2 Drivers and barriers to WLAN usage 60 • 4.6 The corporate sectors 61 • 4.6.1 Case study 1: The media broadcasting company 62 • 4.6.2 Case study 2: The government and legal document management company 62 • 4.6.3 Case study 3: The insurance company 63 • 4.7 The road to 4G – WLAN and cellular networks 63 • 4.8 Conclusions: the drivers for the development of mobile business data services 66
		<b>Section Three</b>
		<b>The Offer Analysis: The Market Driven Paradigm</b>
		<b>5 The New Value Proposition: From Connectivity to Access to Services</b>
		5.1 Introduction 71 • 5.2 Mobile service classification 71 • 5.3 Service personalization 74 • 5.4 Third generation applications 75 • 5.5 Mobile commerce 76 • 5.5.1 Defining Mobile Commerce 76 • 5.5.2 Fea-

tures of mobile commerce 77 • 5.6 Location based services 78 • 5.6.1 Emergency services 79 • 5.6.2 Navigation services 79 • 5.6.3 Tracking services 79 • 5.6.4 Information services 79 • 5.6.5 Advertising services 79 • 5.6.6 Billing services 80 • 5.6.7 Benefits of location based applications 80 • 5.7 Multimedia Applications 81 • 5.7.1 Video telephony and videoconferencing 81 • 5.7.2 Audio-visual non-broadcasting data transport over 3G 81 • 5.8 Unified Multimedia Messaging 81 • 5.8.1 Benefits of Multimedia Messaging Services 82 • 5.9 Voice over IP (VoIP) 82 • 5.10 The new generation market proposition 84

## 6 The Potential Revenue for 3G Multimedia Services

6.1 Introduction 85 • 6.2 Business models: the theoretical background 85 • 6.3 Proposed research methodology 86 • 6.4 Location based services 87 • 6.5 Mobile Gambling 89 • 6.6 Mobile retailing 90 • 6.6.1 Vending communication via UMTS network 90 • 6.7 Mobile Advertising 92 • 6.8 Broadcasting 93 • 6.8.1 Processes 93 • 6.8.2 Payment scenarios 93 • 6.9 Wireless pricing strategies 96 • 6.10 Conclusions: 3G business models 97

## Section Four

### Critical Issues for the Development of 3G-4G Systems

## 7 Technology Drivers in 3G-4G Network Planning

7.1 Introduction 103 • 7.2 The migration path from 2G to 3G in Europe 104 • 7.2.1 HSCSD (High-Speed Circuit Switched Data) 105 • 7.2.2 GPRS (General Packet Radio Service) 106 • 7.2.3 EDGE, Enhanced Data GSM Environment 106 • 7.2.4 IMT-2000 Technology 106 • 7.3 3.5G – or enhancements possible with 3G networks 107 • 7.3.1 Bluetooth 107 • 7.3.2 Wireless LAN 107 • 7.3.3 Hot spots 108 • 7.3.4 Virtual hot spots 108 • 7.3.5 Digital TV data broadcasts 108 • 7.4 What is 4G? 108 • 7.5 Standardization issues 109 • 7.6 Migration paths around the world 109 • 7.7 4G and four visions 111 • 7.7.1 Terrestrial radio network 111 • 7.7.2 Satellites 111 • 7.7.3 Peer-to-peer mobile networks 112 • 7.7.4 Digital TV data broadcast evolution 112 • 7.8 Conclusions: is 3G being squeezed? 113

## 8 Enhancing the Mobile Competitive Landscape: The Competition Based View Paradigm

8.1 Introduction 115 • 8.2 Competitive analysis: the theoretical framework 115 • 8.3 The value chain strategy framework 118 • 8.3.1 Process architecture and supply chain development 118 • 8.4 Market

attractiveness analysis 120 • 8.5 Market competitive scenarios 122 • 8.5.1 Service capabilities for the five scenarios 123 • 8.6 Changes in competitive advantages 125 • 8.7 Mobile Virtual Network Operator 125 • 8.7.1 Mobile Virtual Network Operator: definition 125 • 8.7.2 Current regulatory positions regarding MVNOs 127 • 8.8 Market entry strategies adopted by Mobile Virtual Network Operator 130 • 8.8.1 Pricing principles 130 • 8.8.2 Non-price requirements 131 • 8.9 Infrastructure sharing 131

## Section Five

### Wireless Systems Beyond 3G: The Scenarios

## 9 The Dynamic Forces that Influence the 3G Wireless Telecommunication Value Chain: Defining Scenarios

9.1 Introduction 137 • 9.2 The basic form of the dynamics model 137 • 9.2.1 The customer causal loop 137 • 9.2.2 The competitive causal loop 139 • 9.2.3 The technology causal loop 140 • 9.2.4 The basic model 142 • 9.3 Scenario analysis 142 • 9.4 Scenario development 144 • 9.4.1 Defining the scenarios 144 • 9.4.2 Scenario market forecasting 144 • 9.4.3 Validation of the scenarios 145 • 9.5 Scenario summaries 145 • 9.5.1 Scenario 1: slow evolution 145 • 9.5.2 Scenario 2: business-centric 145 • 9.5.3 Scenario 3: evolved mass market 148 • 9.5.4 Scenario 4: commoditized mass market 149 • 9.6 Conclusions: the forces influencing the supply chain 149

## Appendixes

Abbreviations (Wireless LANs/WANs and IP Mobility)	155
Glossary	159
3G Licensing in Various Economies	163

# Introduction

## Background

As telecommunications move into an era where the distinction between voice, video and data will be blurred, convergence of communications, information, entertainment, commerce and computing will lay the foundation for the development of an Information Society in Europe.

Over the last five years there have been a number of significant developments in multimedia computing power, CD-ROM technology, digital television, the Internet/Intranet, and IP-based services and terrestrial and satellite mobile communications, which have a profound impact on our society. These technologies and systems may enable dramatic changes to take place in working practices, entertainment, education and healthcare.

Many organizations within the computing, entertainment, and communications industries are now looking to identify and capitalize on the promise of new market opportunities in multimedia created by these developments. To date, these organizations have worked largely within the fixed network sector. However, demand for multimedia services, should they be successful, is unlikely to be constrained to the fixed network. Greater pressure on time, and the need for flexibility and responsiveness in business, will lead to a growing demand for access to these services anytime, anywhere. It follows that a great opportunity exists for the mobile industry to contribute to the development of the Information Society by its ability to provide easy access to public databases and government services, and to increase the availability of and access to skilled, knowledge-based workers.

In order to meet the evolving needs of customers, and to capture the opportunity which this evolution represents, the worldwide mobile industry is developing a third and fourth generation of mobile technology.

Third generation mobile systems will take the personal communica-

tions user into the Information Society by delivering voice, graphics, video and other broadband information direct to the user, regardless of location, network or terminal. These personal communications services will provide both terminal and service mobility on fixed and mobile networks, taking advantage of the convergence of existing and future fixed and mobile networks and the potential synergies that can be derived from such convergence.

The key benefits that third generation promises include improvements in quality and security, incorporating broadband and networked multimedia services, flexibility of future service creation and introduction, and offering ubiquitous service portability.

The aim of this book is to identify the key uncertainties and events associated with the development of the market of mobile multimedia services, which may be delivered by third generation systems, and to quantify the market based on varying outcomes of these uncertain issues and events.

Although 3G technologies are just emerging, research has commenced on fourth-generation (4G) technologies. These research initiatives encompass a variety of radio interfaces and even entirely new wireless access infrastructure. Better modulation methods and smart antenna technology are two of the main research areas that enable fourth-generation wireless systems to outperform third-generation wireless networks.

The concept of full Internet mobility considered in this book arises from the development of mobile telephony services towards the provision of new data services. Given the importance of the Internet as the central axis on which the information society is to be developed, the success of 2G mobile systems and the need to provide content for the 3G networks, mobile Internet is the fruit of the convergence between the Internet world and mobility.

Mobile Internet is used in a generic sense to allude to the new mobile telephony technologies such as GPRS and UMTS, and WAP applications on 2G. This association is not, however, correct, as it is
